

UM80S AND UM80SV, WALL MOUNT SOLVENT SPRAY GUN CLEANERS

CLEANING BECOMES FAST AND EASY

- Effectively cleans spray guns with a disposable cup system.
- Solvent flows through the **Nozzle** to clean the paint passage in less than 30 seconds.
- Solvent flows through the **Flow-through Brush** to clean the outside of the brush.
- The cap can be cleaned using the **Pad** and **Flow-Through Brush**.
- Mount the compact, spray gun cleaner on the wall inside the spray booth for color changes or in the general shop area.
- Non-corrosive stainless steel cleaning tank.
- For use with solvent based paints only.

UM80S:

- The flow of solvent through each of the **Nozzle** and **Flow-through Brush** is powered by a diaphragm pump, 2 pumps in total. There is a flow control valve for each cleaning tool.

UM80SV:

- The flow of solvent through the **Nozzle** and **Flow-Through Brush** is a solvent/ air mixture due to the use of 2 vacuum ejectors instead of 2 diaphragm pumps. No flow control valves. In this economical model the solvent consumption is less due to the solvent/ air mixture.

FOR DISPOSABLE CUP SYSTEMS. IDEAL FOR QUICK COLOR CHANGES.
